Subject:

An appeal for the discontinuance of violation and infringement of our industrial property & rights, know-how and related intellectual property by Cassandra Oil AB, Sweden.

Dear statutory representative of Cassandra Oil AB,

this appeal is in regards to our previous letter from 05/06/2012 concerning the violation and infringement of our industrial rights, know-how and related intellectual property by Cassandra Oil AB, Sweden; which has been sent via a FedEx courier to the Cassandra Oil AB board of directors: Erik Nerpin and Johan Thorell, however we have yet to receive any form of reply.

Since 1996, our company has operated in the field of development and production of machineries used for processing and valorisation of less-valuable and waste materials with high hydrocarbon content. Technical solution labelled as the **PROCESS FOR THERMAL AND/OR CATALYTIC DECOMPOSITION AND/OR DEPOLYMERIZATION OF LOW-GRADE ORGANIC SUBSTANCES AND DEVICE FOR CARRYING OUT THE PROCESS** published in the world as WO1998/039368 is protected by patents which are in force in the following 9 countries: Norway, Canada, Great Britain, Russia, Germany, Japan, Czech Republic and Slovakia, along with the USA (US 6 165 349). The patents were gradually granted since 1998 up until 2005 with the priority since the year 1997. For the marketing purposes, our device and process was given the name BLOWDEC (BLOWing DEComposition) where it is registered under the trade mark (see www.blowdec.com).

When monitoring new potentially rival patents; we had recently discovered on the websites of WIPO/PCT an internationally published application of the Patent WO2011/078779 named 'Reactor comprising a rotor', which is derived from the Patent SE 0901600-7 granted in Sweden; the author of it is Mr. Anders Olsson. Via further investigation it has been found; that the rights of the patent are under the control of a Swedish publicly traded joint-stock company Cassandra Oil AB. The aim of this company and its subsidiaries Cassandra Oil Technology AB *a* Cassandra Oil Processing AB is to commercialise the technical solutions and attainments of Mr. Anders Olsson in terms of processing the wastes, the waste tyres in particular, the waste plastics, the oil sludge, the old disposal sites of the oil waste and the electro scrap material.

After an independent expert evaluation of the document WO2011/078779 it has been claimed that the technical solution of the reactor which is described here is only one of the constructions/designs of our device defined in WO1998/039368, i.e. in the US patent 6.165.349. The reactor patented by the patent WO2011/078779 emerges from the deceptively described matters regarding the attributes of our reactor that are supposedly being improved by it. Mr. Anders Olssons' solutions are undoubtedly in direct conflict with our patent entitlements. Furthermore they do not meet the fundamental condition for obtaining a patent- the novelty in relation to the Swedish patent as well as to the application WO2011/078779.

The important factor is the violation of our patent rights by Cassandra Oil AB in the section of entitlements mentioned in all the acquired patents that preserve our method, i.e. process which takes place in the reactor when processing raw waste materials. In our patents, the process and method are vastly defined; the patent SE 0901600-7 i.e. WO2011/078779 does not comprehend any entitlement or claim in this matter.

However the essential factor, is the fact that Mr. Anders Olsson is via Cassandra Oil AB illegally exploiting restricted and secret confidential knowledge, which he himself acquired from 2007 to 2010 while having business relations with our company. By doing so, he is not only harming our company, but likewise Cassandra Oil AB. In that time, Mr. Anders Olsson held the function of managing director of the company Gulf Star Oil Ltd. residing in Cyprus and with a UK-based company Gulf Star Oil Processing Ltd. (further referred to as GSO Ltd.). Thus he had in compliance with signed licensed contracts a broad access to the confidential knowledge and know-how which shape the intellectual property of our company.

Mr. Olsson was frequently present at the presentations of our R&D device/unit Blowdec dedicated for the potential customers of GSO Ltd.. During these presentations and tests, the same waste materials which are now in the field of interest and supply of Cassandra Oil AB, were processed by our device.

Moreover, Mr. Olsson had visited the production factory on more occasions. There, on the basis of the signed contracts, the technological device with Blowdec 250kW reactor for GSO Ltd. was being produced. During the visits of our Blowdec 45kW R&D unit as well as during the production of Blowdec 250kW device, Mr. Olsson had been taking photos (pictures). He was permitted to do so in regards of the contracts and their parts about confidentiality of the intellectual property.

In the attachment, the business cards of Mr. Olsson and Mr. Pursharifi are enclosed, with the name of the technology **“euroreactor – THE MAĎAR PROCESS”** inscribed. The exact same name of the technology was at the informative panels of the Blowdec device itself as far back as in the winter of 2009/2010 (attachment No. 3). Mr. Olsson has during our business relations suggested and claimed for the change of the technologies name because of the fact that our original name Blowdec could supposedly have connoted and lascivious meaning that would be evoked and connected with our company in English speaking countries. We had agreed to this suggestion under the condition that the name of the author of the technology will remain stated.

The entire contemporary activity of Cassandra Oil AB in this field is thus based on and derived from the abused and dispossessed results of research and development financed and executed by our company since 1996. This action is without any doubt contrary to Slovak, International, British, as well as Swedish law. The activities of Mr. Anders Olsson in this manner would qualify as criminal acts committed against our company, the inventor of our technology as well as against the shareholders of Cassandra Oil AB. The acts of Mr. Anders Olsson and thereafter of Cassandra Oil AB have been and until today are still harmful to our company.

In regards to the aforementioned we are requesting with immediate effect that you cease the violation of our intellectual property by Cassandra Oil AB. We are declaring that we have started legal proceedings concerning the termination of Swedish patent SE09016007. We are also objecting to the application for the patent WO2011/078779 and we will enforce a halt to any further applications for patent.

We are informing you that in the near future we will publicise the business antics of Mr. Anders Olsson and of Cassandra Oil AB and the true origin of the machine in question. In addition, you can expect that we will notify those in the Stockholm stock-exchange, the Swedish chamber of commerce, the company Remium Nordic AB, the auditor's company Pricewaterhouse Coopers AB, the authorised inspector of Klas Brand and all the majority shareholders of Cassandra Oil AB.

We are also sending this appeal to your auditor company Pricewaterhouse Coopers AB, which as you are aware, is an important shareholder of your company, to SOCIETE GENERALE S.A. and to the legal department of National Oilwell Varco Inc, Houston, USA.

A legal action will be initiated against Mr. Anders Olsson in England, Sweden and Slovakia on suspicion of committing criminal acts of violation of the information from the business contact, of violation of the business contracts and of violation of the intellectual property rights.

The company Cassandra Oil AB will be sued in order to compensate the harm done and to terminate the violation of our intellectual property. All aforementioned steps will be executed in co-operation (in accordance with the valid licensed contract) with the Houston-based corporation National Oilwell Varco (NOV). The national corporation NOV is, on the bases of the licensed contract from 2005 signed between NOV and our company, disposing with the rights of our patents and intellectual property. Cassandra Oil AB infringes via its actions the rights of NOV too, in the field for which they have been given the worldwide exclusivity.

Sincerely,

A handwritten signature in blue ink, appearing to read 'mad'ar', with a horizontal line above the final 'r'.

Ivan Mad'ar
director
